

August 23, 2019

Dear Mr Forster,

ALYN Hospital is a pediatric rehabilitation center in Jerusalem Israel. We treat children with various congenital and acquired physical disabilities from all over Israel.

As part of their rehabilitation process, assistive technology is a major contributor to providing them independence.

Having access to the wheelchairs and IPADS that the Forster Foundation provided to ALYN, changed the lives of many of our patients. The wheelchairs were provided to children that did not have access to mobility devices or that needed an additional mobility device to enable them independence in different environments. The IPADS provide communication opportunities for the children in our Day Care Center, with other children and care-givers. We introduce the IPADS very early and help children that are non-verbal to express themselves.

We wanted to thank you so much for your support. You are making a big difference in their lives!!

Sincerely,

Naomi Gefen

Deputy Director General

ALYN Hospital
